## I believe **in nature**

„Each of us has and needs something to believe in. Some people rely on their families, friends and others believe in themselves, their instincts and visions.

Years ago, when I decided to invest in a well-known brand of Slovak natural calcium I knew it would be a difficult journey with several challenges and hurdles.

Today, I can already say that we have moved up to the players who set trends and who know which way to take.

*Our choice and priority is modern and safe production of medicines and dietary supplements.*

Thank you for deciding to come with us.”

**Ján Guniš**  
Chairman of the Board of BIOMIN a.s.

## What can **we do for you?**

Quality is of outmost importance for us because we realize that dietary supplements and medicines help people who have lost the most valuable thing in life – **their own health.**

We have many years of experience, we know consumers, both the domestic and foreign markets and we are able to offer sensible solutions verified by practice. Our production complies with the requirements of good manufacturing practice in securing quality of medicine production (GMP). The high standard of our products, quality and accuracy of production have been confirmed by regular checks performed by the State Institute of Drug Control.

*We have prepared production capacities that will satisfy demanding requirements of small and large customers.*

**Dr. Juraj Vozár**  
Director General of BIOMIN a.s.

## Our services

1)

**Encapsulation** – we offer you a high-performance capsule filler that wraps your dietary supplements and medicines without using any additives, artificial colours and preservatives. It is also suitable for clients with a higher health risk, persons suffering from allergy, coeliac disease, phenylketonuria.

2)

**Micronization** – improvement of bioavailability of substances.

3)

**Packaging of loose mixtures** – intended for medical and veterinary use in GMP quality.

4)

**Blister packaging** – production and packaging in blister packs made to order according to your needs.

5)

**Bottling** – finishing products into their final marketing form.

6)

**Repackaging and personalization of packaging** – tailoring for various markets according to your specific requirements.

7)

**Packaging into sachets** – production and printing of paper sachets, packaging of loose mixtures into sachets of your own design.

8)

**Adjustment** – customisation of the final product to your needs and requirements.

9)

**Labelling** – comprehensive finished product packaging services.

10)

**Injecting** – marking of products in compliance with applicable European legislation.

11)

**Pilot and prototype production** – production also in small quantities when you want to test your products in a small sample of customers. Customized production starting already from 300 pieces.

## Natural calcium – a unique product worldwide from Cífer

A Slovak company with a worldwide patent. This is **BIOMIN a.s., a company** where years of experience of our ancestors and modern technologies meet.

Our grandparents already knew that eggshells are an excellent source of natural calcium. It was back in 1990, when Karol Michálek, a veterinarian, had an idea of how to make use of leftover eggshells of the then Západoslovenské hydinárske závody (West Slovak Poultry Works) at Cífer.

The result is a unique technology which allows us to manufacture **a unique product – natural calcium from eggshells already for decades.**

## Patented natural product

We are the only manufacturer in Europe, if not worldwide, who manufactures medicines and dietary supplements with natural calcium from eggshells. Our products can be found not only at home but also abroad. We export our products to the Czech Republic, Poland, the Netherlands, Austria and the Middle East. We process several tens of tons of eggshells a year. The construction of a new pavilion in 2017 has expanded our capacities and capabilities. It is both a challenge and an opportunity for us to grow further. It means more opportunities of cooperation for you in projects that matter to you.

## Gold Standard OVOVITAL®

We have been manufacturing natural calcium from eggshells for almost 30 years. The portfolio of our products has expanded during the years, however, the basic substance remains unchanged and it keeps its quality - **OVOVITAL®**.

The fact that it is **a purely natural product** made of eggshells of table hen eggs which are a rich source of natural calcium, biogenic minerals and microelements such as Zn, Mn, Li, Se, Cu in natural biological bonds and not a chemically prepared calcium salt makes our product profoundly different from other products containing calcium. Moreover, it also contains other biologically active substances which ensures a good exploitability of the main component of the product – calcium.

Natural calcium **OVOVITAL®** – this mineral food additive is the answer to calcium intake for persons suffering from diabetes, phenylketonuria, coeliac disease and lactose intolerance. Ideal for children, pregnant women and nursing mothers as well as for those who want to live healthy in harmony with nature and their body.

# Product portfolio

**medicine:** Biomin H®  
**dietary supplements:** enriched natural calciums

# Certificates and authorisations

- 1) The State Institute for Drug Control has issued a Certificate of compliance with good manufacturing practice by the manufacturer for manufacturing operations – active substances, extraction of active substances from natural sources, general final procedures – drying, grinding, heat treatment, homogenization, immediate packaging, outer packaging, quality control – testing, physical/chemical tests, microbiological tests.
- 2) The State Institute for Drug Control has issued a Certificate of compliance with good manufacturing practice by the manufacturer for manufacturing operations – medicines, non-sterile medicines, packaging, quality control – testing.
- 3) The Ministry of Health of the Slovak Republic – Authorization to manufacture medicines intended for human use, tested medicines, control, production of pharmaceuticals.
